Classical Scholar Texts With *jurabib*

Service For Readers and Scholars
Annotations in Endnotes - but correctly

Karsten Reincke*

July 24, 2018

Abstract

Handling bibliographic references also influences the reception: if it's good it makes the reading easier. One example for such an handling is the style of classical scholar research and its' annotations presented in footnotes (respectively endnotes). This little article demonstrates this classical scholar style (respectively the style of the humanistics) -realized with LaTeX, BibTeX, komascript *and* jurabib.

1 The Annotated Text

A scientific paper[1] written in the *Classical Scholar Research* style which not only wants to argue for a new position or insight but to offer it's reader the possibility to adopt the research history by the way. The history of humanities is the history of the secondary literature. Hence the footnotes in the *Classical*

[1] This English text is an extract of the longer German version. The English text 'only' demonstrates the classical sholar style (of humanities), The German text also explains why this style is (a somewhat) better than the style recommended by the *MLA Handbook for Writers of Research Papers*. Both, the English and the German Version of *Service For Readers and Scholars* are generated on the base of the *mycsrf-framework*. It's an Open (Source) Document and can freely be downloaded under http://github.com/kreincke/mycsrf

Scholar Research style present all information about a work if it's quoted for the first time. If it is quoted again, it's referred by the short title of the bib-file[2]. If it is cited multiply - directly in a row of notes on the same page, then and only then the shortcuts *id.* and *ibid.* or *l.c.* should be used. Let me demonstrate what this means:

- A *book*[1] is quoted for the first time.
- A *proceedings*[2] is quoted for the first time.
- An *inproceedings*[3]is quoted for the first time.
- An *article of a journal*[4] is quoted for the first time.
- A *book*[5] is quoted for the second time.
- A *proceedings*[6] is quoted for the second time.
- An *inproceedings*[7]is quoted for the second time.
- An *article of a journal*[8] is quoted for the second time.
- A sophisticated book[9] is quoted for the first time.
- Now - directly following - another page of this sophisticated book[10] is quoted.
- Now - again directly following - the same page of this sophisticated book[11] is quoted again.
- Now another complex book of the same author[12] is quoted for the first time.
- And now the first sophisticated book of the same author[13] is quoted again.
- Sometimes it's better to note the bibliographic data of a book (collection, proceedings) [which covers / contains articles / parts of different authors] not as an autonomous bitex data set but as an inline part of the covered article. In this case the quoted article[14] will be mentioned as integrated set of data at both places, on the page quoting the article and in the bibliography.

This is the end of the text, the end of the pure text. But now the annotations and references follow each of them in separat section - hence in the annotations are presented in endnotes.

Periodicals, Shortcuts, and Overlapping Abbreviations

AfdA .... Anzeiger für deutsches Altertum
ibid. .... ibidem = latin for 'at the same place'
id. .... idem = latin for 'the same', be it a man, woman or a group...

---

[2] I prefer the pattern 'Author-Name: Short-Title, Year'. But I didn't find any solution to convince jurabib to do this automatically. Therefore in each field 'shorttile' of my bib-files I append at the real short title a comma followed by the year. If anyone knows a better solution I would be glad to get a message from him.

ANNOTATIONS

ifross	Institut für Rechtsfragen der Freien und Open Source Software
l.c.	loco citato = latin for 'in the place cited'
stw	suhrkamp taschenbuch wissenschaft
UTB	Uni-Taschenbuch
wp.	webpage / webdocument without any internal (page)numbering
....	Zeitschrift für Allgemeine Wissenschaftstheorie / Journal for General Philosophy of Science [ISSN: 0044-2216]
ZfdA	Zeitschrift für deutsches Altertum und deutsche Literatur [ISSN: 00442518]
